

Smart Dupline® Analog Input Module Type SHPINNI2

CARLO GAVAZZI

- 2 x Ni1000 (TK5000)/Pt1000
- Bus-powered
- Input type selectable from SBWEB/SHWEB configuration tools
- Small dimension housing for decentralized installation inside wall-box

Product Description

SHPINNI2 is an input module with 2 x Ni1000/Pt1000 inputs. The compact size of the module makes it possible to fit it into a wall-box or small junction box, thereby enabling a decentralized installation concept where the Dupline® bus is multidropped from sensor to sensor. This simplifies the wiring to the controller compared to traditional star

wiring connections, reduces the number of DDC's and sub-panels required and provides a higher flexibility for last minute changes and enhancements. The selection of input type (Ni1000 or Pt1000) and input range to be used is done with the SBWEB/SHWEB configuration tools. Note: The accuracy depends on the input range selected.
