**Proximity Inductive Sensors** 

Extended Range, Nickel-Plated Brass Housing

## **Product Description**

Types ICB, M12

A family of inductive proximity switches in industrial standard nickel-plated brass housings. They are able to handle applications where high sensing range is requested. Output is open collector NPN or PNP transistors.

#### Sensing distance: 4 to 8 mm

- Flush or non-flush types
- Short or long body versions
- Rated operational voltage (U<sub>b</sub>): 10 36 VDC
- Output: DC 200 mA, NPN or PNP
- Normally open or Normally closed
- LED indication for output ON
- · Protection: reverse polarity, short circuit, transients
- Cable or M12 plug versions
- According to IEC 60947-5-2
- · Laser engraved on front cap, permanently legible
- CSA certified for Hazardous Locations

#### Ordering Key ICB12S30F04NOM1

#### **Dimensions (mm)**

be determined in the end-use

application.

**CARLO GAVAZZI** 

#### Dimensions (mm) (cont.)

#### Installation

Flush sensor, when installed in damping material, must be according to Picture 1A.

Flush sensors, when installed together in damping material, must be according to Picture 2A.

For sensors installed opposite each other, a minimum space of 6 x  $S_n$  (the nominal sensing distance) must be observed (See Picture 3).

Non-flush sensor, when installed in damping material, must be according to Picture 1B.

Non-flush sensors, when installed together in damping material, must be according to Picture 2B.

## **CARLO GAVAZZI**

#### Wiring Diagram

#### **Reduction Factors**

The rated operating distance is reduced by the use of metals and alloys other than Fe360.

The most important reduction factors for inductive proximity sensors are shown in Picture 4.
